10 Zoho Creator Deluge Programs

with Explanation and Output

Deluge (Data Enriched Language for the Universal Grid Environment) is the scripting language used in Zoho Creator, the low-code platform. Each program below shows the purpose, the script, and the expected output. **info** writes to the log; **alert** shows a popup to the user.

Program 1: Hello World / Alert Message

Shows a message to the user when a button (Custom Action) is clicked.

Deluge Code

```
alert "Hello, Welcome to Zoho Creator!";
```

Output

```
A popup appears:
Hello, Welcome to Zoho Creator!
```

Program 2: Sum of Two Numbers

Form fields: Number1 and Number2 (Number). Runs on form submit / field update.

Deluge Code

```
a = input.Number1;
b = input.Number2;
sum = a + b;
info "Sum = " + sum;
alert "Sum = " + sum;
```

Output

```
Input: Number1 = 15, Number2 = 25
Output: Sum = 40
```

Program 3: Even or Odd Number

Uses the modulo operator and an if-else condition.

Deluge Code

```
num = input.Number;
if(num % 2 == 0)
{
    alert num + " is Even";
}
else
{
    alert num + " is Odd";
}
```

Output

```
Input: Number = 7
Output: 7 is Odd

Input: Number = 10
Output: 10 is Even
```

Program 4: Factorial of a Number

Uses a for-each loop over a generated list of numbers.

Deluge Code

```
n = input.Number;
fact = 1;
for each i in {1..n}
{
    fact = fact * i;
}
info "Factorial of " + n + " = " + fact;
alert "Factorial of " + n + " = " + fact;
```

Output

```
Input: Number = 5
Output: Factorial of 5 = 120
```

Program 5: Find the Largest of Three Numbers

Uses nested if / else-if conditions to compare values.

Deluge Code

```
a = input.A;
b = input.B;
c = input.C;
if(a >= b && a >= c)
{
    big = a;
}
else if(b >= a && b >= c)
{
    big = b;
}
else
{
    big = c;
}
alert "Largest number = " + big;
```

Output

```
Input: A = 12, B = 48, C = 30
Output: Largest number = 48
```

Program 6: List Operations (Collection)

Creates a list, adds an element, sorts it and finds its size.

Deluge Code

```
nums = List();
nums.add(40);
nums.add(10);
nums.add(30);
nums.add(20);
nums.sort();
info "Sorted List: " + nums;
info "Total items: " + nums.size();
info "Maximum: " + nums.get(3);
```

Output

```
Sorted List: [10, 20, 30, 40]
Total items: 4
Maximum: 40
```

Program 7: String Functions

Demonstrates built-in text functions: toUpperCase, length, subString, replaceAll.

Deluge Code

```
name = "zoho creator";
info name.toUpperCase();
info name.length();
info name.subString(0,4);
info name.replaceAll("creator","deluge");
```

Output

```
ZOHO CREATOR
12
zoho
zoho deluge
```

Program 8: Map (Key-Value) Example

Creates a Map collection and reads values by key.

Deluge Code

```
emp = Map();
emp.put("Name","Arun");
emp.put("Dept","Sales");
emp.put("Salary",35000);
info "Name   : " + emp.get("Name");
info "Dept   : " + emp.get("Dept");
info "Salary : " + emp.get("Salary");
info emp.keys();
```

Output

```
Name   : Arun
Dept   : Sales
Salary : 35000
[Name, Dept, Salary]
```

Program 9: Fetch Records and Count (Database Task)

Form: Student_Form with fields Name, Marks. Fetches students who scored above 50.

Deluge Code

```
passed = Student_Form[Marks > 50];
info "Students passed: " + passed.count();
for each rec in passed
{
    info rec.Name + " - " + rec.Marks;
}
```

Output

```
Sample data: Ravi-72, Priya-45, Kiran-88, Anu-39

Students passed: 2
Ravi - 72
Kiran - 88
```

Program 10: Insert a Record into Another Form

On submit of Order_Form, automatically inserts a record into Invoice_Form with calculated total.

Deluge Code

```
total = input.Quantity * input.Price;
insert into Invoice_Form
[
    Customer = input.Customer_Name
    Amount = total
    Added_User = zoho.loginuser
];
alert "Invoice created. Total = " + total;
```

Output

```
Input: Customer = Meena, Quantity = 4, Price = 250
Output: Invoice created. Total = 1000
(A new record Meena / 1000 is added to Invoice_Form)
```

Program 11: Date Functions & Days Difference

Gets today's date, adds days and finds the difference between two dates.

Deluge Code

```
today = zoho.currentdate;
due = today.addDay(10);
diff = daysBetween(today, due);
info "Today    : " + today.toString("dd-MMM-yyyy");
info "Due Date : " + due.toString("dd-MMM-yyyy");
info "Days left: " + diff;
```

Output

```
(If today is 31-Oct-2026)
Today    : 31-Oct-2026
Due Date : 10-Nov-2026
Days left: 10
```
